Professional Summary

Electronics and Telecommunication Engineering student (graduating 2028) with hands-on experience building embedded-system and PCB prototypes, developing web-based projects, and exploring intelligent matching systems. Skilled in C, C++, Python, microcontrollers, and modern web tools. Also completed a two-month content creation and video editing internship at Motion Learning App.

Education

B.E. in Electronics and Telecommunication Engineering *Expected 2028*
D.Y. Patil College of Engineering, Akurdi, Pune

Technical and Core Skills

Programming: C, C++, Python, JavaScript, SQL
Web & Databases: HTML, CSS, React, Next.js, Firebase Authentication, Cloud Firestore
CS Knowledge: Data Structures and Algorithms, DBMS, Computer Networks, Machine Learning fundamentals
Core E&TC: 8051 and PIC microcontrollers, sensor interfacing, digital electronics, communication systems, I^2C, SPI, IoT fundamentals
Hardware & Software Tools: Arduino Uno, relay control, PCB design, KiCad, MATLAB
Creative Tools: CapCut, VN, DaVinci Resolve, Canva, AI-assisted video production

Core E&TC Projects – Physical Prototypes

Biometric Door Locking System *Hardware Prototype*
Arduino Uno, Fingerprint Sensor, Relay, Solenoid Lock, 16 × 2 LCD
- Built a physical fingerprint-based access-control prototype using an Arduino Uno, relay-driven solenoid lock, LCD, and buzzer.
- Integrated fingerprint verification with door-lock actuation and user feedback, combining sensor interfacing and embedded control.

Metal Detector *Hardware/PCB Prototype*
Electronic Sensing Circuit, PCB Design, KiCad
- Worked hands-on to assemble and test a metal-detection circuit and its physical PCB prototype.
- Practiced component placement, polarity and footprint checks, circuit testing, and hardware troubleshooting.

Software and Technology Projects

Career Compass – Career Guidance Platform *Web Project*
Next.js 16, React, Firebase Authentication, Cloud Firestore
- Developed a web-based career guidance project focused on career-path exploration, skill-gap assessment, and personalized learning progress.
- Worked with user authentication, structured profile data, and Firestore-backed task and progress tracking.

AI-Based Smart Allocation Engine – PM Internship Scheme *Matching Prototype*
Python, React, Candidate–Internship Scoring
- Developed a prototype to match internship candidates with opportunities using skills, qualifications, location preferences, and role fit.
- Explored transparent weighted scoring and allocation constraints, including internship capacity and fair placement considerations.

Experience

Content Creator & Video Editor Intern – Motion Learning App *2026 | 2 months*
- Created and edited JEE/NEET-focused short-form educational content, including PYQ reels, study tips, and app-feature explainers.
- Contributed to scripting, vertical-video storytelling, AI-assisted visuals, editing, captions, and brand-aligned calls to action.

Independent Video Editor & Content Creator – YouTube / Instagram *2021 – Present*
- Planned, edited, and published short- and long-form content; built an audience of **4,800+ YouTube subscribers** and **10,200+ Instagram followers**.
- Achieved **69.1K+ views** on a YouTube video and **1.2M+ views** on an Instagram Reel.
